

Raymond Quarshie

College Park, MD 20742 | (240)-446-0006 | r.rayquarshie@gmail.com | github.com/rayq-codes

PROFESSIONAL SUMMARY

Cybersecurity and Information Science undergraduate at the University of Maryland with hands-on experience in AI/cloud development, IT support, and security tooling. Seeking internship or entry-level opportunities in security analysis, cloud security, or software engineering.

EDUCATION

University of Maryland — College Park, MD

Expected May 2028

B.S. in Cybersecurity and Information Science | Cumulative GPA: 3.75

EXPERIENCE

AI Cloud Intern

June 2026 – Present

Rackner — College Park, MD

- Contribute to Postern, an open-source, zero-trust data governance platform that unifies enterprise databases, files, and APIs into a queryable knowledge graph for natural-language queries.
- Extend connector support, an audit viewer, and entity resolution, and conduct security reviews to validate the platform's governance model prior to production readiness.
- Research emerging technologies, including AI, cloud computing, and cybersecurity, to support innovative projects.

IT Help Desk Technician

October 2025 – Present

University of Maryland, Division of Information Technology — College Park, MD

- Support approximately 15 users and tickets per day, coordinating digital scheduling systems and resource access for IT operations.
- Direct users to appropriate technical resources, improving support and information flow.
- Applied data organization and workflow optimization practices to improve operational efficiency.

Cybersecurity Accelerator Program Intern

March 2026 – March 2026

The Washington Center (TWC) — Washington, DC

- Completed a short-term cybersecurity program focused on security careers, operations, and enterprise IT environments.
- Networked with cybersecurity professionals and engaged with real-world security challenges and infrastructure concepts.

PROJECTS

Postern — Full-Stack AI Data Access Security Platform

2026

- Built an open-source platform that unifies enterprise databases, files, and APIs into a queryable knowledge graph, letting users ask plain-English questions without exposing raw data to the AI.
- Designed a policy engine (Open Policy Agent) that issues temporary, purpose-scoped access grants and routes sensitive requests through human approval, so the AI never self-authorizes access.
- Implemented automatic PII masking/tokenization (Microsoft Presidio) and a tamper-evident, hash-chained audit log (FastAPI, PostgreSQL, Neo4j) for traceable, least-privilege access.

Cybersecurity Automation Scripts

2025

- Created Python scripts for log parsing and pattern detection to simulate intrusion detection use cases.
- Experimented with AI/LLM integration for basic automation tasks.

House Price Prediction — Machine Learning & Data Science

2025

- Built a regression model using Python (pandas, scikit-learn) to predict housing prices from a dataset.
- Applied one-hot encoding, data cleaning, and feature scaling to improve model accuracy.

ACTIVITIES & LEADERSHIP

National Computer Science Honor Society — Treasurer

Jan 2023 – Jan 2024

- Managed chapter finances and led outreach sessions teaching elementary students foundational CS concepts.

University of Maryland Information Science Hackathon

Jan 2023 – Jan 2024

- Collaborated in a hackathon to solve problems presented by paired grade-school students.

SKILLS

Cybersecurity & Systems: Cybersecurity, Linux, Intrusion Detection, Log Analysis, Infrastructure Security

Languages: Python, Bash, Java, JavaScript, C++, SQL, HTML, CSS

Technologies & Tools: Docker, FastAPI, PostgreSQL, pandas, scikit-learn, Cloud Computing

Domains: AI/LLM Integration & Automation, Data Analytics, Computer Graphics
